description/ordering information

This single inverter gate is designed for 1.65-V to 5.5-V V_{CC} operation.

The SN74LVC1G04 performs the Boolean function $Y = \bar{A}$.

NanoStar™ and NanoFree™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using I_{off} . The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.
